Personal Profile

Graduated with a master's degree in software engineering at Epitech Paris. I had the chance to have gained experience in the several fields of the software life cycle, from front end development with React JS / TS, to backend development with Python and its various Frameworks FastAPI and Flask, to the deployment of programs on promised infrastructures and on the cloud AWS and GCP.

I have more than 7 years of experience as a software developer and more precisely as a backend developer with the Python language. I have a good understanding of the Python language and its different libraries.

Being passionate and very curious, I regularly follow the latest trends and best practices of the tools and languages I use on a daily basis as well as the new tools that become available over the years. I also have several personal projects in Data and DevOps that I will be happy to present to you if you are interested.

I'm looking for a job that would give me the opportunity to work with a team with members ready to share their knowledge and to have the opportunity to work on a technical stack that I master but through which I would learn every day, in a healthy and good working environment.

Skills

- Frontend: HTML, CSS, Javascript, Typescript (React)
- Backend: Python (FastAPI, Flask)
- Database: PostgreSQL, MySQL
- Cloud: AWS, GCP
- DevOps: Ansible, Teraform, Gitlab, Docker, Traefik
- AI: Ollama, LLM, Opencode, MCPs
- Data: Numpy, Pandas, Matplotlib, Seaborn
- Machine learning: Scikit-learn
- Computer vision: OpenCV
- Versioning: Git, Github, Gitlab
- Environment: Linux, Windows, Mac

Education

MASTER'S DEGREE IN SOFTWARE ENGINEERING | EPITECH

Epitech is a computer science school created in 1999 which trains experts in the sector in 5 years after graduation. It allows to transform a passion into expertise through a resolutely innovative pedagogy.

It is designed to encourage open-mindedness, meetings with influencers and experts, to find the problem, they are looking to solve.

My schooling in a few words:

- Diagnose the company's current situation and anticipate changes.
- Analyze external growth targets and meet financing needs.
- Forward: Inspired by the Canvas business model (generating value).
- Expertise in object-oriented development
- Full Stack Web Development: HTML, CSS, JavaScript (React JS), PHP, Python (Flask, Django)
- Machine and software development: C, C++.

CERTIFICAT EN SOFTWARE ENGINEERING | SAN FRANCISCO STATE UNIVERSITY

San Francisco State University prepares students for careers as software professionals. The school develops and works with a wide variety of technologies to build systems and applications that help solve today's problems.

My schooling in a few words:

- Study of software architecture and design patterns.
- Study of usability, design, development, evaluation and principles of graphical user interfaces.
- Practice of several project organization methodologies.
- Acquisition of theoretical and practical skills in network programming.
- Study of the conception, design, documentation and implementation of a database application.

Languages

- French: Native language
- English: Fluent

Experiences

PYTHON DEVELOPER / DEVOPS | MADURA CAPITAL MANAGEMENT
SEPTEMBER 2024 – MARCH 2026

The mission: Development of internal tools and automation systems to streamline trading operations and data flows within the hedge fund.

Focus Area:

- Designed and implemented multiple data feeders to ingest, clean, and structure financial data from diverse sources (PDFs, CSVs, APIs).
- Create from scratch a ChatGPT like UI with a self-deployed Qwen LLM on Ollama to query internal data from the UI
- Deployed and orchestrated Prefect workflows for automating end-to-end data pipelines (ETL), including:
    - Extracting trade and market data from files (PDF, CSV)
    - Ingesting and pushing data into PostgreSQL databases
    - Generating daily reports automatically for internal stakeholders
- Built a React TypeScript interface to allow users to manually create and manage different types of trades, with dynamic forms and validation logic.
- Created a modular architecture to allow easy extension for new types of assets and workflows.
- Ensured CI/CD pipelines for reliable deployments and quick iterations.
- Designed a clean and extensible backend in Python (FastAPI) to support the frontend and data automation.
- Wrote unit and functional tests to ensure correctness and robustness of all processes.
- Implementation of database migration (Alembic).

Skills:

- Backend: Python (FastAPI, Prefect)
- Frontend: React, Typescript
- Database: ORM (SQLModel), PGSQL
- DevOps: Docker, Terraform, Ansible
- AI: Ollama, LLM, Opencode, Qwen
- Testing: Pytest
- Versioning: Git

PYTHON DEVELOPER / DEVOPS / AWS | SNAPCHAT (SNAPLAB)
MAY 2022 – SEPTEMBER 2024

The mission: Development and deployment of a dashboard to be used by Snaplab team members to record all user sessions during tests of Snap's Connected Spectacles.

Focus Area:

- Setting up the Backend project architecture (Python, FastAPI)
- Creation of the controllers allowing the management of users, scenes, sessions and analysis (Python, PostgreSQL, SQLModel)
- Creation of routes with input validation (Python, FastAPI, Pydantic).
- Implementation of unit tests and functional tests (Pytest).
- Created a Dockerfile to deploy the FastAPI API with Python on AWS ECS (Docker, ECS, ECR, Terraform).
- Deploying Python scripts on AWS Lambda (Docker, AWS Lambda, AWS ECR).
- Creating a database via the AWS RDS service (AWS RDS, PostgreSQL).
- Implementation of database migration (Alembic).
- Wrap the infrastructure inside a VPC that can be accessed through a Load Balancer (AWS VPC, AWS ALB)
- Deployment of React Typescript website on a domain name (AWS Route 53, AWS Amplify).
- Creation of a frontend dashboard (React JS, Typescript).
- Deploy the frontend dashboard on AWS Amplify (AWS Amplify, Terraform).

Skills:

- Backend: Python (FastAPI)
- Database: ORM (SQLModel), PGSQL
- Cloud: AWS
- DevOps: Docker, Terraform, Ansible
- Testing: Pytest
- Versioning: Git

PYTHON DEVELOPER / DEVOPS / CLOUD | ENEDIS (EDF)
APRIL 2021 – APRIL 2022

The mission: Development and deployment of a platform allowing users who submitted a request to Enedis to follow up on their request and to be able to exchange with Enedis via a chat if necessary

Focus Area:

- Setting up the Backend project architecture (Python, FastAPI)
- Creation of the controllers allowing the management of tickets, messages and users (Python, PostgreSQL, SQLModel)
- Creation of a controller providing KPIs related to user actions (Python, PostgreSQL, SQLModel).
- Creation of routes with input validation (Python, FastAPI, Pydantic).
- Implementation of unit tests and functional tests (Pytest).
- Created a Dockerfile to deploy the FastAPI API with Python 3.10 on AWS Lambda (Docker, AWS Lambda).
- Deploying the docker image on AWS ECR (Docker, AWS ECR).
- Use of serverless framework enabling automation of FastAPI API deployment (Serverless, AWS Lambda).
- Creating a database via the AWS RDS service (AWS RDS).
- Implementation of database migration (Alembic).
- Deployment of React Typescript website on a domain name (AWS Route 53, AWS Amplify).
- Setting up a CI / CD on Github Action (Git, Github Action).

Skills:

- Backend: Python (FastAPI)
- Database: ORM (SQLModel), PGSQL
- Cloud: AWS
- DevOps: Github Action, Docker, Serverless framework, Terraform
- Testing: Pytest
- Versioning: Git

PYTHON DEVELOPER / DEVOPS | BNP PARIBAS PERSONAL FINANCE | SEPTEMBER 2019 – MARCH 2021

The mission: I participated in the creation, development, optimization, and deployment of APIs written in Python, allowing data scientist users to run IDEs connected to a NAS allowing them to access large volumes of sensitive data inside protected infrastructures

Focus Area:

- Transitioning from a monolithic architecture to a microservice architecture (API, PostgreSQL)
- Setting up the structure of the new APIs (Python, FastAPI)
- Creation of controllers allowing the management of users and their access to the application and NAS (Python, PostgreSQL, SQLModel)
- Creation of a controller to create KPIs related to user actions (Python, PostgreSQL, SQLModel).
- Creation of routes with input validation (Python, FastAPI, Pydantic).
- Implementation of unit tests and functional tests (Pytest).
- Creation of a Dockerfile to deploy the FastAPI API on On-Promise servers.
- Deployment of docker images via Ansible (Docker, Ansible)
- Implementation of the database migration (Alembic).
- Creation of a pre-commit hook allowing the integration of a Local CI (Python, Pre-commit)
- Development of a notification banner on the user interface (React JS)
- Fixing issues reported by users on the frontend (React JS)
- Modification of CI / CD on Gitlab CI (Git, Gitlab).

Skills:

- Backend: Python (FastAPI)
- Frontend: React JS
- Database: PGSQL
- DevOps: Gitlab CI/CD, Docker, Ansible
- Testing: Pytest
- Versioning: Git

PYTHON / CLOUD DEVELOPER | CLOUDEASIER (ACCENTURE) | FEBRUARY 2019 – AUGUSTE 2019

The mission: Develop solutions that enable companies to reduce the financial costs of their Cloud infrastructures.

The tasks:

- Retrieving compute instance prices from AWS and GCP (Python, AWS, GCP).
- Development of a Python script deployed on lambda allowing the update of compute instances prices in a database (Python, PGSQL, AWS, GCP).
- Development of a Python script deployed on Lambda allowing to turn on and off EC2 instances received in parameter.
- Development of a Python script deployed on a Google Cloud Function allowing to schedule the switch on and switch off of compute engines.
- Deployed a Gateway API and a lambda inside a VPC via Terraform.
- Deployment of a Lambda function triggered by a CloudWatch Event via Terraform.
- Deployment of a google scheduler and a google function via Terraform.
- Configuring a Gitlab Webhook to make an API call to an AWS API Gateway during a push event.
- Implementation of Back-End unit tests (Pytest).

Skills:

- Backend: Python
- Database: MySQL, PGSQL
- Cloud: AWS, GCP
- DevOps: Terraform, Gitlab, Docker
- Testing: Pytest
- Versioning: Git

Personal Projects

ONLINE PART GAME | OCTOBER 2025 – MARCH 2026

The project:

Online Party Games is a real-time multiplayer platform for Islamized versions of popular party games. Players can create rooms, invite friends, and play games like Undercover and Codenames using Islamic terminology. The platform features live game synchronization via WebSockets, multilingual support (English, Arabic, French), and a hint system to help players learn Islamic terms as they play.

Skills:

- Frontend: React, TypeScript, TanStack Router/Query, Tailwind CSS, shadcn/ui
- Backend: Python, FastAPI, SQLModel, SQLAlchemy (async)
- Real-time: Socket.IOs
- Database: PostgreSQL
- Infrastructure: Docker, CI/CD (GitHub Actions), Oracle Cloud VPS
- Testing: Pytest, Vitest, Playwright (E2E)
- Versioning: Git

MY DEVOPS LAB | FEBRUARY 2023 – MARCH 2023

The project:

My DevOps Lab is a website that allows you to easily create and visualize your architecture diagram for your projects. With our intuitive editor, you can design software architectures, define cloud infrastructures, and even model deployment flows. This provides you with a clear overview of your system, enabling better planning and informed decision-making.

Skills:

- Frontend: React, Typescript
- Cloud: AWS
- **Versioning**: Git

DEPLOYED A STREAMING PLATFORM (JELLYFIN) | SEPTEMBER 2021 – MARCH 2022

The project:

Deployed on a local Linux server a streaming platform (Jellyfin) allowing 89 users to watch TV shows, movies, and anime through different devices (web browser, smartphone, smart TV).

Skills:

- **Devops**: Linux, Docker, Docker-Compose, Portainer, Terraform, Traefik
- **Network**: Traefik, Reverse Proxy
- Cloud: AWS
- **Versioning**: Git

Hobbies

- Video Games: Life is Strange, Super Smash Bros, League of Legends
- Series, Anime, Manga: Mr Robot, FullMetal Alchemist, Gunnm
- Sports: Soccer, Running, Swimming, Fitness
- Music: French and US Rap, Electro
- Restaurant: Indian, Japanese and Arabian Food
